The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-5, 8, 9-13, & 16-21 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Frantello.

Claims 1, 7, & 14 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Laabs.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Art Unit: 3712

Claim 15 is rejected under 35 U.S.C. 103(a) as being unpatentable over Laabs in view of Frantello.

Laabs shows a nock system including an insert 3 attached to the rear of an arrow by means of a stud 2 which is received in the hollow arrow, and a receiver 4 which is captured on the bowstring. The insert and receiver are disengageably engaged by means of a disconnect means, which is shown as a ball and socket. One may find that the ball and socket are not sufficiently secure. Frantello shows that a nock system may include an insert and receiver which are disengageably engaged by means of a magnet. One would recognize that using such a magnet with the nock system of Laabs may make the connection between the receiver and insert more secure. It would have been obvious to one of ordinary skill in the art to use a magnet with the nock system of Laabs, as suggested by Frantello.

Claim 6 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
